Docket No.	:	703538.4032

### Amendments to the Claims

Before calculating fees and considering the claims, please cancel claims 13-14, 18, and 22-23. This listing of claims will replace all prior versions and listings of claims in the application:

1. (original) A miniature combustor comprising:  
a chamber having first and second ends,  
a liquid-fuel inlet into the chamber, and  
a gas inlet formed in a first end of the chamber,  
wherein the chamber having a lateral dimension transverse to a major flow direction within the chamber that is sub-centimeter.
2. (original) The combustor of claim 1 wherein the lateral dimension is in a range of about 1.0 to 3.0 millimeters.
3. (original) The combustor of claim 1 wherein the chamber is generally cylindrical.
4. (original) The combustor of claim 1 wherein the length of the chamber is in a range of about 1.0 to 10.0 centimeters.
5. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises a fuel injector oriented to eject fuel onto a surface within the chamber.
6. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises at least a portion of a chamber wall formed of a porous material.
7. (original) The combustor of claim 1 wherein the liquid-fuel inlet comprises a plurality of orifices.

Docket No. : 703538.4032

8. (currently amended) The combustor of claim 7,8 further comprising a plurality of liquid fuel injectors, each coupled to one of the plurality of orifices and oriented tangentially to a wall of the chamber and orthogonally to the major flow direction within the chamber.

9. (original) The combustor of claim 8 wherein the plurality of liquid fuel injectors comprise first and second set of injectors wherein the first and second set of injectors are symmetrically opposed about the chamber.

10. (original) The combustor of claim 1 further comprising a swirl generator.

11. (original) The combustor of claim 10 wherein the swirl generator comprises a swirler positioned within the chamber adjacent the first end.

12. (original) The combustor of claim 10 wherein the swirl generator comprises a plurality of gas inlets tangentially coupled to the chamber adjacent the first end of the chamber.

13-14. (cancelled)

15. (currently amended) A combustion process comprising the steps of injecting liquid into a combustion chamber, wherein the chamber has a lateral dimension transverse to a major flow direction within the chamber that is sub-centimeter,

forming and maintaining a liquid film over substantially an entire interior surface of the chamber,

injecting an oxidizing gas into the chamber, and

burning an oxidizing gas and fuel mixture within the chamber.

16. (original) The method of claim 15 wherein the liquid is a fuel.

17. (currently amended) The method of claim 16 wherein the liquid is an inert liquid and the fuel mixture comprises a gaseous fuel.

18. (cancelled)

19. (currently amended) The method of claim 15 further comprising the step of swirling the oxidizing gas~~injected air~~.

20. (original) The method of claim 15 wherein the step of forming and maintaining a liquid film over substantially an entire interior surface of the chamber, includes reducing combustion heat losses to walls of the chamber.

21. (original) The method of claim 15 wherein the step of injecting an oxidizing gas includes injecting the oxidizing gas axially into the chamber and swirling the axially in-flowing gas by passing it through a swirl generator positioned adjacent to an inlet of the chamber.

22-23. (cancelled)
